

Installation Instructions

Gas Fireplace Insert Heater Listed Certified for USA. and Canada

Model Numbers:

IDV34 - Stock Numbers: IDV34N, IDV34NE, IDV34NE2, IDV34LP, IDV34LPE, IDV34LPE2
Minimum Fireplace Opening Required: 28-5/8"W x 21-1/2"H x 17-3/4"D

IDV44— Stock Numbers: IDV44N, IDV44NE, IDV44NE2, IDV44LP, IDV44LPE, IDV44LPE2
Minimum Fireplace Opening Required: 32-7/8"W x 25-3/4"H x 18"D

Are Certified to: ANSI Z21.88-2017 • CSA 2.33-2017, CSA 2.17-2017

⚠ WARNING:

FIRE OR EXPLOSION HAZARD

Failure to follow safety warnings exactly could result in serious injury, death, or property damage.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- **WHAT TO DO IF YOU SMELL GAS**
 - Do not try to light any appliance.
 - Do not touch any electrical switch; do not use any phone in your building.
 - Leave the building immediately.
 - Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
 - If you cannot reach your gas supplier, call the fire department.
- Installation and service must be performed by a qualified installer, service agency or the gas supplier.

This appliance may be installed in an aftermarket, permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

⚠ WARNING: The IDV34 / IDV44 Fireplace Insert was designed for installation in a solid fuel fireplace that has been installed in accordance with national, provincial / state and local building codes and is constructed of noncombustible materials. Do not remove any refractory materials from any masonry solid fuel fireplace.

The IDV34 / IDV44 Fireplace Insert was designed for installation in a zero clearance type listed solid fuel burning factory built fireplace. It may be necessary to remove the damper plate, refractory liners, log grates, glass door, and screen rails/mesh. Removal of the smoke baffle is necessary in most cases.

DANGER

**HOT GLASS WILL CAUSE BURNS.
DO NOT TOUCH GLASS UNTIL COOLED.
NEVER ALLOW CHILDREN TO TOUCH GLASS.**

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

If the barrier becomes damaged, the barrier shall be replaced with the manufacturer's barrier for this appliance.

INSTALLER: Leave this manual with the appliance.

CONSUMER: Retain this manual for future reference.

Safety Screen Installation- IDV34 / IDV44 – CV1BL & MQCV2BL Kits

⚠ WARNING:

Wait until unit is **COMPLETELY** cool before touching glass or attempting to install or remove Child Safety Screens.

SAFETY SCREENS ARE SUPPLIED IN CV1BL & MQCV2BL Kits

TO INSTALL SCREENS

Insert Hooks on Safety Screen into Slots in Glass Door Frame.

GLASS DOOR IS INSTALLED ON FIREPLACE.

SHOWN REMOVED FOR CLARITY ONLY

Fireplace with Safety Screen installed.

To remove Safety Screens

WAIT UNTIL FIREPLACE IS COMPLETELY COOL.

Lift up on Safety Screen Frame and disengage Hooks in Safety Screen from Slots in Glass Door Frame.

Pre-installation Questions and Answers

About curing of the paint

Your stove or fireplace has been painted with the highest quality silicone stove paint. This paint dries quickly in 15-20 minutes when first applied at the factory. However, due to the high temperature silicone components, the paint will cure when heat is applied to the appliance as it is first used. The following information applies to the curing process to get the paint fully hard and durable.

Fire the appliance four successive times for 10 minutes each firing and a 5 minute cool down between each. Be aware during log and firebox paint curing that a white deposit may be developing on the inside of the glass doors. It is important to remove this white deposit from the glass doors using a fireplace glass cleaner.

- Babies, small children, pregnant women and pets should leave the area during the cure phase.
- Ventilate well, open doors and windows.
- Do not touch during curing.

Why does my fireplace or stove give off odour?

It is normal for your fireplace to give off some odor at first. This is due to the curing of the paint, adhesives, silicones and any undetected oil from the manufacturing process as well as the finishing materials used with the installations (e.g. marble, tile and the adhesives used to adhere this product to the walls can react with heat and cause odours).

It is recommended that you burn your gas fireplace or stove for a minimum of four hours at a time with the fan off (if a fan is present) after the curing of the paint has been completed. These odours can last upward to 40 hours of burn time; keep burning at a minimum of four hours per use until odours dissipate.

Noise coming from the fireplace?

Noise is caused by the expansion and contraction of metal as the appliance heats up and cools down. This is normal and is similar to the sounds produced by a furnace or heating duct. This noise does not affect the operation or longevity of your fireplace.

It is also normal for the fan to make some noise when it comes on. This noise can be reduced somewhat by turning down the speed of the fan with the variable speed control. Be aware, however, that this will reduce the volume of heated air circulated into the room by the fan.

Note to the Installer:

Be sure appliance is working properly and its operation (including remote control operation, if included) is fully explained to and understood by the customer.

Operations and Maintenance Instructions

For safe installation and operation note the following:

- Be sure to read and understand all the instructions in this manual before operation of appliance.
- Ensure all wiring is correct and properly enclosed to prevent possible shock.
- Check for gas leaks.
- Make sure the glass door is properly installed before operation. Never operate the appliance with the glass door removed.
- Make sure venting and termination cap are installed and unobstructed.
- If brick or porcelain liners are used, ensure they are installed.
- Verify that the pilot can be seen when lighting the appliance. If not, the log or rock placement is incorrect.
- If the unit is turned off, you must wait a minimum of 60 seconds before re-lighting it.
- Venting systems should be periodically examined by a qualified agency.
- The flow of combustion and ventilation air must not be obstructed.
- The Burner/Log Assembly has been engineered and permanently adjusted for proper flame control.
- Periodically remove the logs from the grate assembly and vacuum any loose particles from the grate and burner areas. See Log Placement page to remove logs. Vacuum burner parts and replace logs.
- Never use your gas fireplace as a cooking device.
- Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.
- Areas in and around the Chase Vent Openings should be cleaned annually.

Annual Inspection List for Determining Safe Operation of a Direct Vent Gas Fireplace

Refer to this checklist for proper maintenance, safe use, and operation.

See each section for more specific information.

1. Inspect and operate all pressure relief mechanisms (i.e., explosion dampers, spring loaded door latches) installed on your appliance to verify relief mechanisms are free from obstruction to operate.

2. Clean glass window with a suitable fireplace glass cleaner. Abrasive cleaners must not be used. Be careful not to scratch the glass when cleaning.

3. Inspect the operation of the Pilot. Ensure that it is working properly.

4. Inspect and ensure the lighting of the main burner occurs within 4 seconds of the main gas valve opening. Visual inspection should match that outlined in the appliance instruction manual (refer to **Monthly Flame Inspection**). Inspect primary air openings for blockage.

5. Inspect condition of vent and vent terminal for sooting or obstruction and correct if present.
6. Vacuum and clean any debris in the firebox that is not supposed to be there.
7. Test and measure the flame failure response time of the flame safety system. It must de-energize the safety shutoff in no more than 30 seconds.

Procedure for Millivolt Units: Turn on fireplace for 5 minutes. Shut off fireplace while listening to valve. A “click” should be heard within 30 seconds. This indicates the safety shutoff is working properly.

Procedure for IPI Units: Turn on fireplace and allow main burner to come on. Then disconnect Flame Sense wire from IPI Module (X3 Connection). The fireplace should shut down immediately.
8. Check all accessible gas-carrying tubes, connections, pipes and other components for leaks.

Important Information

INSTALLATIONS

- The following label (supplied with the gas fireplace insert) must be attached with rivets or screws to the inside of the firebox of the fireplace into which it is installed:
- Cutting any sheet-metal parts of the fireplace, in which the gas fireplace insert is to be installed, is prohibited.
- If the factory-built fireplace has no gas access hole(s) provided, an access hole of 1.5 in (37.5 mm) or less may be drilled through the lower sides or bottom of the firebox in a proper workmanship like manner. This access hole must be plugged with non-combustible insulation after the gas supply line has been installed.
- The fireplace flue damper can be fully blocked open or removed for installation of the gas fireplace insert.
- Ensure that existing chimney cleanouts fit properly.
- refractory, glass doors, screen rails, screen mesh and log grates can be removed from the fireplace before installing the gas fireplace insert.
- Smoke shelves, shields and baffles may be removed if attached by mechanical fasteners.
- Trim panels or surrounds must not seal ventilation openings in the fireplace.
- The fireplace and fireplace chimney must be clean and in good working order and constructed of non-combustible materials.

WARNING: THIS FIREPLACE HAS BEEN CONVERTED FOR USE WITH A GAS FIREPLACE INSERT ONLY AND CANNOT BE USED FOR BURNING WOOD OR SOLID FUELS UNLESS ALL ORIGINAL PARTS HAVE BEEN REPLACED AND THE FIREPLACE RE-APPROVED BY THE AUTHORITY HAVING JURISDICTION. (PLEASE APPLY THIS TO THE FIREPLACE THAT THE INSERT IS BEING INSTALLED INTO)

AVERTISSEMENT: CETTE CHEMINÉE A ÉTÉ CONVERTIE UNIQUEMENT POUR ÊTRE UTILISÉE AVEC UN ENCASTREMENT POUR CHEMINÉE AU GAZ ET NE PEUT PAS ÊTRE UTILISÉE POUR BRÛLER DU BOIS OU DES COMBUSTIBLES SOLIDES À MOINS QUE TOUTES LES PIÈCES D'ORIGINE AIENT ÉTÉ REMPLACÉES ET QUE LA CHEMINÉE AIT ÉTÉ RÉAPPROUVÉE PAR LES AUTORITÉS AYANT JURISDICTION. (APPLIQUEZ CELA SVP À LA CHEMINÉE DONT L'ENCASTREMENT EST EN TRAIN D'Y ÊTRE INSTALLÉE)

PART #331DV-LABWARN

MAINTENANCE

- If for any reason the vent air intake system is disassembled, re-install and re-seal per the instructions provided for the initial installation. See "Installation of Vent Pipe" section.
- It is recommended to annually inspect and clean the Burner System to prevent malfunction and / or sooting. This operation should be performed by your dealer or a qualified technician. Refer to Burner System Maintenance section.
- Venting systems should be periodically examined by a qualified agency.
- Periodically remove the logs from the grate assembly and vacuum any loose particles from the grate and burner areas. See Log Placement page to remove logs. Vacuum burner parts and replace logs.

-Glass Safety- All Units

IT IS THE RESPONSIBILITY OF THE HOME OWNER TO ENSURE THAT NO ONE TOUCHES A HOT APPLIANCE.

If the barrier becomes damaged, the barrier shall be replaced with the manufacturer's barrier for this appliance.

Any safety screen, guard, or barrier removed for servicing the appliance, must be replaced prior to operating the appliance.

- Children and adults should be alerted to the hazards of the high surface temperatures of this appliance and should stay away to avoid burns or ignition of clothing.
- Do not clean when the glass is hot.
- Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns.
- A physical barrier is recommended if there are at risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at risk individuals out of the room and away from hot surfaces.
- Do not leave the fireplace remote control where it is accessible to children.

! DANGER

HOT GLASS WILL CAUSE BURNS.

DO NOT TOUCH GLASS UNTIL COOLED.

NEVER ALLOW CHILDREN TO TOUCH GLASS.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

Warnings, Installations and Operations - Installation Regulations

This gas appliance must be installed by a qualified installer in accordance with local building codes, or in the absence of local codes, with the current CAN/CSA-B149.1 or .2 Installation Code (in Canada) or the current National Fuel Gas Code Z223.1- NFPA 54 when installed in the United States. This appliance, when installed, must be electrically connected and grounded in accordance with local codes, or in the absence of local codes, with the current CSA C22.1 Canadian Electrical Code or with the National Electrical Code; ANSI/NFPA 70 when installed in the United States. In the U.S.A. Thermostats are not permitted for Vented Gas Fireplaces (ANSI Z21.50b-Decorative).

FOR SAFE INSTALLATION AND OPERATION OF YOUR GAS FIREPLACE PLEASE NOTE THE FOLLOWING:

1. Do not clean when the glass is hot.
2. Do not use abrasive cleaners.
3. Using a substitute glass will void all product warranties.
4. For safe operation, glass doors must be closed.
5. When purging the gas line, the glass front must be removed.
6. Do not strike or abuse glass. Take care to avoid breakage.
7. Do not alter gas orifice.
8. No substitute materials may be used other than factory supplied components.
9. This appliance gives off high temperatures and should be located out of heavy traffic areas and away from furniture and draperies.
10. Children and adults should be alerted to the hazards of the high surface temperatures of this appliance and should stay away to avoid burns or ignition of clothing.
11. Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at risk individuals out of the room and away from hot surfaces.
12. Under no circumstances should any solid fuels (wood, paper) be used in this appliance.
13. Under no circumstances should this appliance be modified. Any parts that have to be removed for servicing should be replaced prior to operating this appliance.
14. Any safety screen, guard, or barrier removed for servicing an appliance must be replaced prior to operating the appliance.
15. Installation and repair should be done by a qualified service person. The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, et cetera. It is imperative that control compartments, burners and circulating air passageways of the appliance be kept clean. Make sure that the gas valve and pilot light are turned off before you attempt to clean this unit.
16. Clothing or other flammable material should not be placed on or near the appliance. This appliance should not be used as a drying rack for clothing nor should Christmas stockings or decorations be hung from it.
17. Do not use this heater if any part has been under water. Immediately call a qualified service technician to inspect the heater and to replace any part of the control system and any gas control which has been under water.
18. Do not operate appliance unless completely installed as per installation instructions.
19. Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.
20. **WARNING: Do not operate appliance with the glass front removed, cracked or broken. Replacement of the glass should be done by a licensed or qualified service person.**
21. The appliance area must be kept clear and free from combustible materials, gasoline, and other flammable vapors and liquids.
22. The front of the fireplace gives off high temperatures that could ignite combustible material which is kept close to the front of the unit.
23. Ensure that power to the Fireplace is turned off before servicing.
24. Do not operate this Fireplace without the glass front or with a broken glass.
25. Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner's information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency, or the gas supplier.
26. Operation of this appliance when not connected to a properly installed and maintained venting system or tampering with the blocked vent shutoff system can result in carbon monoxide (CO) poisoning and possible death.
27. This appliance is equipped with a three-prong (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.
28. Gas fired appliances may be used only for supplemental heat and/or decorative purposes and under no circumstances shall they provide a primary heat source.
29. This appliance must not be connected to a chimney flue serving a separate solid-fuel burning appliance.

Installation Requirements for the Commonwealth of Massachusetts

In the Commonwealth of Massachusetts, the installer or service agent shall be a plumber or gas fitter licensed by the Commonwealth.

When installed in the Commonwealth of Massachusetts or where applicable codes; the unit shall be installed with a CO detector per the requirements listed below.

1. For direct-vent appliances, mechanical-vent heating appliances or domestic hot water equipment, where the bottom of the vent terminal and the air intake is installed below four feet above grade the following requirements must be satisfied:
 - A. If there is not one already present, on each floor level where there are bedroom(s), a carbon monoxide detector and alarm shall be placed in the living area outside the bedroom(s). The carbon monoxide detector shall comply with NFPA 720.
 - B. A carbon monoxide detector shall be located in the room that houses the appliance or equipment and shall:
 - Be powered by the same electrical circuit as the appliance or equipment such that only one service switch services both the appliance and the carbon monoxide detector;
 - Have battery back-up power;
 - Meet ANSI./UL 2034 Standards and comply with NFPA 720; and
 - Have been approved and listed by a Nationally Recognized Testing Laboratory as recognized under 527 CMR.
 - C. A Product-approved vent terminal must be used, and if applicable, a Product-approved air intake must be used. Installation shall be in strict compliance with the manufacturer's instructions. A copy of the installation instructions shall remain with the appliance or equipment at the completion of the installation.
 - D. A metal or plastic identification plate shall be mounted at the exterior of the building, four feet directly above the location of vent terminal. The plate shall be of sufficient size to be easily read from a distance of eight feet away, and read "Gas Vent Directly Below".
2. For direct-vent appliances, mechanical-vent heating appliances or domestic hot water equipment where the bottom of the vent terminal and the air intake is installed above four feet above grade the following requirements must be satisfied:
 - A. If there is not one already present, on each floor level where there are bedroom(s), a carbon monoxide detector and alarm shall be placed in the living area outside the bedroom(s). The carbon monoxide detector shall comply with NFPA 720.
 - B. A carbon monoxide detector shall:
 - Be located in the room that houses the appliance or equipment;
 - Be either hard-wired or battery powered or both; and
 - Shall comply with NFPA 720.

A Product-approved vent terminal must be used, and if applicable, a Product-approved air intake must be used. Installation shall be in strict compliance with the manufacturer instructions. A copy of the installation instructions shall remain with the appliance or equipment at the completion of the installation.

For the state of Massachusetts a **T-handle gas shut-off valve** must be used on a gas appliance. This T-handle gas shut-off valve must be listed and approved by the state of Massachusetts. This is in reference to the state of Massachusetts state code CMR238.

Carbon Monoxide (CO) Detector

NOTE: It is recommended that a Carbon Monoxide (CO) Detector be installed in or near bedrooms and on all levels of your home. Place a detector about 15ft [4.5m] outside the room that houses your gas appliance.

Certified for installation in a bedroom or bed/sitting room. In Canada must be installed with listed millivolt thermostat. In USA see local codes.

Mobile Home/Manufactured Housing Installation

This Direct Vent System Appliance must be installed in accordance with the manufacturer's installation instructions and the Manufactured Home Construction and Safety Standard Title 24 CFR, Part 3280, or the current Standard for Fire Safety Criteria for Manufactured Home Installation, Sites, and Communities ANSI/NFPA 501A, and with CAN/CSA Z240 MH Mobile Home Standard in Canada.

THIS APPLIANCE MAY BE INSTALLED IN MANUFACTURED (MOBILE) HOMES AFTER FIRST SALE.

Please follow the current ANSI/NFPA 70 National Electrical Code in the USA and CAN/CSA C22.1 Canadian National Electrical Code in Canada.

An appliance must be grounded to the steel chassis of the home with 8ga. copper wire using a serrated or star washer to penetrate paint or protective coating to insure grounding.

Use carriage bolt at the attachment point (see diagram above) to secure the appliance to the floor.
Bedroom approved.

⚠ Warning:

Do not compromise the structural integrity of the manufactured home wall, floor or ceiling, during installation of appliance or venting.

For required venting components see venting installation in appropriate section of this manual.

<p>*NOTE: MQ44CV3 Clean Views have a tapered profile. Refer to illustrations for frontal dimensions. MQ44CV3 Clean Views Require either a Frame Door (MQ44SF1BL) or a Heavy Iron Door (MQ44DD1BL)</p>				

IDV44 Clean Views

NOTE: Clean View Hooks are adjustable (1/4") for uneven wall surface.

I44SU4742 -Universal Surround- IDV44

For use with I44CV1BL, MQ44CV2BL, and MQ44CV3BL.

This Surround can be custom cut and bent.

Cut Surround at dotted line shown above to make the bottom flush with the fireplace bottom.

⚠ WARNING: Combustible objects must not be placed on a non-combustible mantel unless the non-combustible mantel meets the minimum height and width requirements for a combustible mantel.

I44CV1 Combustible Mantel Heights

Dimension	Mantel Depth	I44CV1 Only or with Surround	I44CV1 with Surround and I33CS Mantel Shield

IDV34 / IDV44 – Wall Coverings, Side Walls and Hearth Requirements

Refer to Mantel Heights Charts for your minimum mantel height.

Using Steel Studs and Concrete Board

Brick facing may be removed and replaced with non-combustible materials such as steel studs and concrete board. The opening between the firebox and non-combustible materials must be sealed so as the heat cannot run between the face of the wood fireplace and the re-facing materials.

Insert must be pulled out so the appliance is flush with the finishing materials and the clean view kit is proud of the finished non-combustible enclosure (wood burning fireplace).

Leveling Instructions

When installing insert it may be necessary to support back of unit. There are two leveling legs at the back sides of the appliance. Measure the height of the space to be leveled. Remove screws and set leveling legs to proper height. Replace screws.

Riser Kit Installation Instructions – Model No.: I34R40 / I44R45

⚠ WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

IDV34 / IDV44 – Surround Installation

IDV34 Surrounds: I34S3927, I34SPF4131, 134SU4541

IDV44 Surrounds: I44S4432, I44SPF4436, I44SU4742

PARTS LIST:

- Surround
- [Qty 4] #6 Black Screws

All surrounds attach to the back of the Clean View.

CV1 / CV2 Attachment:

STEP 1:
Place Surround
against back of
Clean View

STEP 2:
Fold Tabs on Clean View over
surround and install with [4]
screws supplied with surround.

BACK VIEW

Surround

FRONT VIEW

CV3 / CV4PF Attachment:

STEP 1:
Place Surround
against back of
Clean View

STEP 2:
Install with [4] screws supplied
with surround.

BACK VIEW

Surround

FRONT VIEW

IDV34 / IDV44**Clean View Attachment****Parts List: I34CV1BL, MQ34CV2BL, I44CV1BL, MQ44CV2BL**

-Clean View, Safety Screen

Parts List: MQ34CV3BL, MQ34CV4PFBL, MQ44CV3BL

-Clean View only (Requires MQSF1 or MQDD1 Door Frame)

Note: Vent adapter and venting must be connected to the unit before Clean Views and Surrounds are attached. Refer to Installation of Vent Pipe section of this manual for venting information.**SECTION 1:** Optional **Surrounds** are fastened to the Clean View.If a surround is to be used, install onto the CV Kit **before** it is mounted.**SECTION 2: Clean View Mount Slots** are located beside the Safety Screen Frame on the Fireplace. Insert the [4] Clean View Mount Hooks into the **Clean View Mount Slots** and lower the Clean View into place.**SECTION 3: Millivolt Systems** - Install ON/OFF Switch into right side of Clean View. See below.

MQSF1BL / MQDD1BL - Attachment to MQI34 / MQI44 CV3 or CV4PF

MQI34 / I44 SFIBL and MQDD1BL Parts List: Door with Screen

Step One:
Remove Top Screw from upper left corner of Clean View.

Step Two:
Place MQSF1 or MQDD1 Door onto Screw at lower inside left corner of Clean View.

Step Three:
Align Top Slot and reinsert screw. Press and hold Hinge Plate to the Left side of Clean View and tighten screws.

Step Four:
Set Stopper Screws on right side of Clean View so that door is flush when closed.

I33CS Mantel Clearance Shield Instructions

Contents of Kit: [1] Mantel Clearance Shield c/w Screws

Place I33CS upside down on a protected surface. Loosen screws.

Center surround onto I33CS. Tighten screws to hold surround in place.

Surround is now ready to install onto Clean View.

RLT / RLH - Brick Liner Panels-

Parts List

- 1 Back Panel
- 1 Right Side Panel
- 1 Left Side Panel

Preparation:

1. Lift Log Supports out of fireplace.
2. Remove the 2 Screws in the Back Panel.
3. Slide and tilt Back Panel to remove.

To Install:

1. Fold up tabs in upper baffle.
2. Install rear brick panel first.
3. Install left and right side panels and secure them with brick clips.
4. Replace Log Supports

PRL- Porcelain Liner Panels-

Parts List

- 1 Back Panel
- 1 Right Side Panel
- 1 Left Side Panel

Preparation:

1. Lift Log Supports out of fireplace.
2. Remove the 2 Screws in the Back Panel.
3. Slide and tilt Back Panel to remove.

To Install:

1. Place Back Panel up against the back of the Firebox and reinstall the 2 Screws.
2. Remove the 2 DT Screws in the sides of the Firebox holding the Brick Clips in place.
3. Tilt and slide the Side Panels into place. Reinstall the 2 DT Screws without the Brick Clips.
4. Replace Log Supports

⚠ Note: Warping and Discoloration of Porcelain or Painted Metal Liners Is Not Covered Under Warranty.

Both Porcelain and Painted Metal Liners may discolor and warp during normal operation of your appliance. This is normal, and not considered a defect.

LOGF35 Log Set.

Glowing Embers supplied with appliance.

This illustration shows the **Rear Log Holder** and 4 **Log Pins**.

Log A has 2 locating holes. Position those 2 holes over the 2 pins on the left side of the log mounting pan as shown in the picture above.

Log B has 2 locating holes. Position those 2 holes over the 2 pins on the right side of the log mounting pan as shown in the picture above.

Log C has to be lowered into position just behind Logs A and B. Log C shall be pulled up to Logs A and B as shown in the picture above.

A bag of **Ember Chunks** is supplied with the appliance. It is very important that these chunks are placed onto the front burner and log mounting pan as shown in the picture. Spread the Ember Chunks out no more than one layer deep.

NOTE: If you do not follow these instructions correctly then sooting problems can occur.

Log Placement – LOGF36

LOGF36 Log Set includes Glowing Embers, Lava Rock, and Vermiculite.

Place Log #1 onto rear log holder and center.

Place Log #2 onto left side of Log #1. Place Log #3 onto right side of Log #1.

Locate 2 holes on bottoms of Logs #4 and #5, and position onto mounting pins.

Locate 1 hole on the bottom of Log #6 and place it onto pin of Log #2. Locate 2 holes on the bottom of Log #7 and place onto the pins of Log #5.

Place Glow Ember Kit onto front burner tube and ember plates. **Lava Rock and Vermiculite are to be placed onto firebox ONLY.**

MQRSP4 / MQRSP8 Rock and Glass Support Platform Installation

Preparation: Remove Grate Bar and replace screws. Remove Ember Plates. Do not remove existing Pilot Shield.

Installation: Place MQRSP4 or MQRSP8 over burner.

MQRSP4

*Pilot Shield should be visually inspected monthly for signs of deterioration due to flame exposure. Replace if necessary.

MQRSP8

MQRSP4 Parts List

- 1Ea Rock Support
- 1Ea Ember Plates Assembly

Remove the ember plates and the grate bar by removing the 2 left and right screws on the grate bar. Reinstall screws after removing parts.

Place the MQRSP4 Rock Platform and ember plates into place as shown in the illustration above.

Step 1: Place Rocks #4 into position as shown. **Be sure not to place them directly over top of the burner tube.**

Step 2: Place Rocks #1 into position as shown above.

Step 3: Place Rocks #4 into position as shown above.

WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

MQROCK2/ MQROCK3 -MQRSP4 (continued)

Step 4: Place Rocks #6 into position as shown above.

Step 5: Place Rocks #3 into position as shown above.

Step 6: Place Rocks #1 into position as shown above.

Step 7: Place Rocks #3 and #4 into position as shown above.

Finished Rock Set and Burn

NOTE: If flame impingement on the rocks causes sooting then you may have to move, or remove, one or more rocks. DO NOT PLACE ROCKS DIRECTLY OVER TOP OF THE BURNER TUBE.

MQSTONE -Requires- MQRSP8

Optional Decorative Stone Set.

Begin by placing larger stones inside burner tube area.

Place smaller stones around outside of burner tube.

Cover back and center of burner tube with assorted stones.

Add smaller stones to center.

Pilot Area MUST be visible at ALL times.

Do Not stack or overlay when placing on Burner Tube. NOT ALL STONES WILL BE REQUIRED TO FILL TRAY. Spread glass or Lava Rock (supplied with unit) around firebox bottom.

*Pilot Shield should be visually inspected monthly for signs of deterioration due to flame exposure. Replace if necessary.

! Verify ignition of pilot and main burner assembly after setup. Too many rocks over burner ports may cause sooting- remove rocks from over burner ports if this occurs.

! **WARNING:** Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

MQ EMBER -Requires -MQRSP8 or RSP10

MQ DEALER ONLY

Spread glass or ember chunks onto tray and burner.

Ensure that layer of glass embers is not excessively thick as this will affect the flame pattern. See below.

! WARNING
Do not change or substitute the glass ember material provided with this fireplace. If replacing, use only replacement glass embers available from your local authorized dealer.

Pilot Shield* Must Be Kept Clear.

MQRSP8

RSP10 (With Glass Retainer in Place)

Note: Do not place all the glass embers onto the tray. Only use what is necessary.

Use care when placing glass embers near the pilot area so as not block or have the glass fall over the crossover holes from the pilot to the burner, as delayed ignition can occur.

The following types of glass and other media are approved (Use of any other type other than listed below can alter the performance of the unit and is not covered under warranty.):

Note: Use only 1/2" glass material on the burner.

• **1/2" Ember Glass Material from American Fireglass**

Maximum amount for **MQRSP8** Natural Gas is 5 lbs, Propane units 5 lbs.

Maximum amount for **RSP10** Natural Gas is 15 lbs, Propane units 15 lbs.

• **MQ Ember**

Maximum amount for **MQRSP8** is 3 bags.

Not used on **RSP10**.

Discoloration of glass media may occur . This is not covered under warranty.

*Pilot Shield should be visually inspected monthly for signs of deterioration due to flame exposure. Replace if necessary.

WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

RSP10 Glass Support Platform -Installation

Preparation: Remove Grate Bar and replace screws. Remove Ember Plates. Do not remove existing Pilot Shield.
Installation: Install RSP10 by placing over burner. Use existing screws at front of firebox bottom to attach Glass Retainer.

Parts List

RSP10: Tray and 1 Pilot Shield*
 Glass Retainer 25-1/2" for IDV34
 Glass Retainer 30" for IDV44
 15LBS Bronze Glass

*Pilot Shield should be visually inspected monthly for signs of deterioration due to flame exposure. Replace if necessary.

RSP 10

Use existing screws to attach Glass Retainer.

Lava Rock supplied with unit may be used as a filler beneath Glass Embers on sides of firebox.

WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

Place Glass Embers over tray and on firebox bottom (left and right). Do not cover pilot shield area. See Glass Ember Installation page for further details.

MQRSP11 Support Platform -Installation

MQRSP11 Parts List:

- [1] Tray and 1 Pilot Shield*
- [1] Glass Retainer (25-1/2" for IDV33) (30" for IDV43)
- [2] Small Bags Lava Rock
- [1] Bag 350 Ember

Preparation: Remove Grate Bar and replace screws. Remove Ember Plates. Do not remove existing Pilot Shield.
Installation: Install RSP by placing over burner. Use existing screws at front of firebox bottom to attach Retainer.

*Pilot Shield should be visually inspected monthly for signs of deterioration due to flame exposure. Replace if necessary.

MQRSP 11

Use existing screws to attach Retainer.

Lava Rock supplied with unit may be used as a filler on sides of firebox.

WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

Place a thin layer of 350 Embers onto burner tube. Place Lava Rock over tray and on firebox bottom (left and right). Do not cover pilot shield area. See Glass Ember Installation page for further details.

MQRSP11 With MQLOGF33 (IDV34) or MQLOGF453 (IDV44)

Must be used with MQRSP11.

NOTE: Lava Rock and 350 Embers supplied with fireplace and MQRSP11.

⚠WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

STEP 1: Fill bottom of firebox around tray with Lava Rock and place **LOG 1** against back wall as shown.

STEP 2: Place **LOG 2** in center-right side of H Burner as shown.

STEP 3: Place **LOG 3** on left side of firebox as shown.

STEP 4: Place **LOG 4** along back wall as shown.

STEP 5: Place **LOG 5** in front of **LOG 2** as shown.

STEP 5: Place **350 Embers** on and around burner. Sprinkle **Vermiculite** onto Lava Rock on firebox bottom.

Fan System

WARNING

Electrical Grounding Instructions

This appliance is equipped with a three prong (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this.

Before Servicing

1. Ensure all power supply is shut off.
2. Label all wires prior to disconnecting when servicing control. Wiring errors can cause improper and dangerous operation.
3. For fan servicing: Vacuum and clean lint/dirt build-up on the fan blades and motor.
4. When resealing the Fan Access Panel, use High Temp. Silicone or Millpac.

1. Remove glass door assembly and log set if installed. Be sure to handle logs carefully as they become fragile after heated.
2. Remove back air shield by unscrewing (4 screws).
3. Remove fan access panel (15 screws). It is located on the back and bottom right hand corner.
4. Remove the fan from the outer shell (2 screws). The fan needs to be twisted and rotated slightly. The fan's motor end will be lifted out first.
5. Reinstall fan, bracket and all necessary components, as shown below, once completed.
6. Verify proper operation after servicing.

Caution: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.

IDV34 / IDV44 Glass Door Information

Glass Cleaning: During normal startup condensation will form, causing dust and lint to cling to the surface of the glass. A commercial fireplace glass cleaner can be used two or three times a season, depending on use of the appliance.

⚠ WARNING AND CAUTIONS

- Do not clean when the glass is hot.
- Do not use abrasive cleaners.
- Using a substitute glass will void all product warranties.
- Do not strike or abuse glass. Care must be taken to avoid breakage of the glass.
- Do not operate this fireplace without the glass front or with a broken glass.

REPLACEMENT GLASS

Only Robax ceramic or coated NeoCeram glass may be used for replacement. The glass must be a minimum of 5mm thick.

⚠ WARNING:

No substitute materials may be used other than factory supplied components.

Spring Replacement: Over time the spring may need to be replaced if tension is lost. Replace spring as follows:

1. Remove the top latches by unfastening the two [2] hex screws that secures it in place. They are located in the firebox.
2. Remove the bottom latches by unfastening the four [4] hex screws located in the firebox (beside the burner assembly). Once the screws are all removed, the latches will either fall or slide out.
3. To remove the spring, unfasten the one [1] lock nut holding it in place. **NOTE:** When replacing a spring tighten the lock nut so that the total compression length is 3-1/2". This is critical for proper tension.

IDV34 / IDV44 Glass Door Removal and Installation

To Disengage Top Latch:

1. Disengage Top Latches by pulling on Latch Pull with one hand and pushing up on Latch Pull with the thumb of your other hand (See Photos to left).
2. Once the top of the door is unlatched, pull it outwards and up to unlatch the bottom.
3. To re-install, place the Bottom Door Ledge into the Lower Latch assembly first. Then swing the door closed to seal it against the firebox cavity.
4. To re-latch the Upper Latch assembly, Pull on Latch Pull with one hand and push up with other hand. Lift Latch over Door Hook and allow Latch Hook to drop down over the Door Hook.

TO REPLACE GLASS:

Clean all materials from door frame. Using a high heat silicone (resistant to 500°F [260°C]) apply a bead of approximately 1/8" to all four sides of frame and insert glass with new gasket. The door frame should be on a flat surface with a small amount of weight pressing the glass into the silicone. Let everything dry for approximately 15 to 20 minutes.

Burner System

1. Remove glass door assembly and logs (if installed). Be careful with logs as they become fragile after being heated.
2. Remove log supports off burner assembly.
3. The burner or burner assembly can now be removed.
 - a. TO REMOVE H-BURNER/ORIFICE CHANGE - Remove the two [2] screws holding the H-Burner in and slide it leftwards off the orifice.
 - b. TO REMOVE BURNER ASSEMBLY - Locate and remove the twelve [12] screws around the outside of the burner pan. This will remove the entire burner assembly.
4. When removing the entire burner assembly, break the seal and lift upwards. Make sure the gas line to the unit has been disconnected.
5. To reinstall the burner assembly ensure the surfaces are cleaned, and old sealant material removed. Use high temp Millpac to seal and secure with the twelve [12] screws.
6. Reconnect the gas line, and reinstall log support, logs, and glass door.

⚠ WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

Burner System Maintenance

It is recommended to annually inspect and clean the Burner System to prevent malfunction and / or sooting. This operation should be performed by your dealer or a qualified technician.

! -CAUTION-

Before servicing the burner system ensure that the gas supply is turned OFF and disconnect all electrical connections to the appliance. Allow the appliance to cool to room temperature. Note that the pilot assembly may be hot in an intermittent or standing-pilot system—even if the main burner was never on. Exercise caution when working within the area.

-ALL WORK SHOULD BE PERFORMED BY A QUALIFIED AND CERTIFIED TECHNICIAN-

Monthly Flame Inspection

It is recommended to turn on the unit at least once a month and inspect the flame pattern to ensure there are no problems with the burner tube. The pilot flame should also be inspected monthly to ensure proper operation.

Flame should appear similar to the above picture.

Conversion Kit Instructions – PART A

Kit Number	Description	Pilot Orifice	Burner Orifice Brass (1000-255)	Brass Nipple	Air Shutter	Hi/Lo Regulator
34IDV-CKLP 44IDV-CKLP	LP Conversion -Millivolt-	1001-P167SI #30 (977.167)	#51 #50	1000-253closed 1000-253closed	1/2" 1/2"	1001-P202SI 1001-P202SI
34IDV-CKNG 44IDV-CKNG	NG Conversion -Millivolt-	1001-P165SI #51 (977.165)	#35 #32	1000-253closed 1000-253closed	3/16" 3/16"	1001-P201SI 1001-P201SI

Refer to "Gas Specifications Chart" for inlet pressures and input ratings. Clock meter to verify input rate. Place conversion label as close to converted gas control as possible. Refer to lighting instructions to verify the normal operating sequence of the ignition system. **IMPORTANT: Always check for gas leaks with a soap and water solution. DO NOT USE OPEN FLAME FOR LEAK TESTING.**

Conversion Kit Instructions – PART A

Caution:

The gas supply shall be shut off prior to disconnecting the electrical power, before proceeding with the conversion.

PLEASE CONFIRM THAT STEP 4 IS UNDERSTOOD BEFORE PROCEEDING WITH CONVERSION.

 **WARNING:** This conversion kit shall be installed by a qualified service agency in accordance with the manufacturer's instructions and all applicable codes and requirements of the authority having jurisdiction. If the information in these instructions is not followed exactly, a fire, explosion or production of carbon monoxide may result causing property damage, personal injury or loss of life. The qualified service agency is responsible for the proper installation of this kit. The installation is not proper and complete until the operation of the converted appliance is checked as specified in the manufacturer's instructions supplied with the kit.

Parts List:

- HI/LO Pressure Regulator Assembly
- Pilot Orifice
- Burner Orifice
- Brass Nipple
- Instructions
- Conversion Kit Label

1. Remove the 2 ember plates from the burner. This step may not be required, depending on the type of burner assembly.
2. Loosen the 2 screws holding the burner in place.
3. Slide the burner to the left to expose the orifice.
4. **Before going any further you need to verify which pilot system is in use. If there is a spring clip below the pilot hood then proceed to STEP 5 in PART B.**
5. Remove the 2 screws that hold the pilot to the bracket.
6. Remove the 2 screws that attach the pilot bracket to the firebox bottom.
7. Remove the pilot bracket to expose the pilot assembly.
8. Remove the pilot tube and nut from the pilot assembly using a 10mm wrench; slide the tube and nut down. You may have to tap the pilot hood lightly to release the pilot orifice. Place new pilot orifice into the pilot assembly and reinstall the pilot tube and nut. Tighten with wrench. Reinstall pilot bracket at this time.
9. Remove main orifice using a 1/2" wrench and replace with new conversion orifice.
10. Adjust the primary air setting to the correct setting as specified in the manual or label plate. To adjust the air setting, loosen the screw on the side of the tube and rotate to the correct opening using a drill bit or tape measure. Retighten screw. Reinstall burner at this time reversing STEPS 3, 2 and 1.
11. Follow instructions supplied with the conversion HI/LO to convert the valve from one type of fuel to the other.
12. Check for gas leaks around the pilot burner tube and face of valve.
13. Attach conversion label to label plate on bottom of unit, writing information as needed.

Gas Conversion for Top Convertible Pilot – Part B (series 0190XYZ)

Instructions for converting SIT 190 series pilot burner injector from NG to LPG and from LPG to NG only. This information should be considered as supplemental to the Appliance Manufacturer's Instructions.

WARNING!

The installation of this conversion kit must only be undertaken by a qualified and certified gas appliance installer.

1. Shut-off the gas supply to the appliance.
2. Allow the pilot burner to cool to room temperature.

WARNING: Touching a hot pilot burner can result in injury.

3. The pilot hood is held in place by spring. First remove the spring, then remove the hood by pulling it up from the pilot bracket (fig. 1).
4. Insert a 5/32" or 4 mm Allen wrench into the hexagonal key-way of the injector (fig. 2), and rotate it counter-clockwise until it is free of the injector journal.
5. Verify that the new injector is proper for the application. The injector size is stamped on the side of the injector near the top. LPG injectors have a groove machined around their circumference near the top, while NG injectors do not have a groove (fig. 4). Refer to the Appliance Manufacturer's instruction sheet for the proper injector size.
6. Insert the Allen wrench into the end of the injector. Then, insert the injector into injector journal, and rotate the injector clockwise until a torque of 9 lbf in (1.0 Nm) is achieved.
7. First replace the pilot hood by aligning the tab on the base of the hood with the slot in the side of the pilot journal, and push the hood down, onto the pilot bracket (fig. 3). The hood must sit squarely on the bracket for proper operation. Then replace the spring by pushing it on his seat (fig.3). Check to insure that the hood is properly seated onto the pilot bracket and that the spring is properly inserted onto his seat.
8. Restore the gas supply to the appliance, and ignite the pilot burner. Verify proper ignition and operation.

fig. 1

fig. 2

fig. 3

fig. 4

WARNING!

This conversion kit must ONLY be applied as part of a conversion kit supplied by the APPLIANCE MANUFACTURER for the specific appliance, and type of gas, being converted.

SIT GROUP

820 NOVA mV

Modulating Conversion Kit

WARNING!

The installation of this conversion kit must only be undertaken by a qualified and certified gas appliance installer.

MODULATING PRESSURE REGULATOR CONVERSION KIT INSTALLATION OR REPLACEMENT INSTRUCTIONS.

- 1 Turn control knob to the OFF position, and shut off the gas supply to the valve.
- 2 Using a Torx T20, or slotted screwdriver, remove and discard the three pressure regulator mounting screws (A), pressure regulator tower (B), and the spring and diaphragm assembly (C).
(If applicable)
- 3 Insure that the rubber gasket (D) is properly positioned and install the new modulating pressure regulator assembly to the valve using the new screws (E) supplied with the kit. Tighten screws securely.
(Reference torque = 25 In.Lb.)
- 4 Install the enclosed identification label (F) to the valve body where it can be easily seen.
- 5 Apply gas to system and re-light appliance according to manufacturers instructions.
- 6 With the main burner "ON", test the new pressure regulator assembly for leaks using a soap solution.
- 7 Relight the main burner in both the HI and LO positions, and verify proper burner ignition and operation.

WARNING!

This modulating conversion kit must ONLY be applied as part of a conversion kit supplied by the APPLIANCE MANUFACTURER for the specific appliance, and type of gas, being converted.

INSTALLER NOTICE. These instructions must be left with appliance.

SIT Group

Gas Line Installation

This gas appliance should be installed by a qualified installer in accordance with local building codes and with current CAN/CSA - B149.1 installation codes for Gas Burning appliances and equipment in Canada and the National Fuel Gas Code ANSI Z223 in the U.S.A.

State of Massachusetts

For the state of Massachusetts a T-handle gas shut-off valve must be used on a gas appliance. This T-handle gas shut-off valve must be listed and approved by the state of Massachusetts. This is in reference to the state of Massachusetts state code CMR238.

1. The gas pipeline can be brought in through either the right or left side of the appliance. Knockouts are provided at these locations to allow for the gas pipe installation and testing of any gas connection.
2. The gas control inlet is 3/8" NPT. Typical installation layout for rigid pipe is shown at right.
3. When using copper or flex connector, use only approved fittings. Always provide a union so that gas line can be easily disconnected for burner or fan servicing. See gas specification for pressure details and ratings.
4. When a vertical section of gas pipe is required for the installation, a condensation trap is needed. See CAN/CSA-B149.1 for code details.
5. For natural gas, a minimum of 3/8" iron pipe with gas minimum pressure of 5.5" w.c. must be used for supply from the gas meter. Consult with the local gas utility if any questions arise concerning pipe sizes.
6. Ports are accessible for test gauge connection both on the inlet and outlet of the gas valve.
7. Turn the gas supply ON and check for leaks. **DO NOT USE OPEN FLAME FOR THIS PURPOSE.** Use an approved leak testing solution.
8. The appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2psig [3.5 kPa].
9. The appliance must be isolated from the gas supply piping system by closing its individual shutoff valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2psig [3.5 kPa].

Note: The gas line connection may be made of 1/2" rigid pipe, 1/2" copper pipe or an approved flex connector. Since some municipalities have additional local codes, it is always best to consult your local authorities and the current CAN/CSA - B149.1 installation code in Canada or the National Fuel Gas code ANSI Z223.1 in the U.S.A.

IMPORTANT: Check for gas leaks with a soap and water solution. DO NOT USE OPEN FLAME FOR LEAK TESTING.

Models	IDV34N/NE/NE2	IDV34LP/LPE/LPE2	IDV44N/NE/NE2	IDV44LP/LPE/LPE2

Millivolt System, Lighting, and Burner Control

FOR YOUR SAFETY READ BEFORE LIGHTING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

BEFORE LIGHTING

- | | |
|--|--|
| <p>A This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly.</p> <p>B Smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.</p> | <ul style="list-style-type: none"> • Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions. • If you cannot reach your gas supplier, call the fire department. <p>C Use only your hand to push or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don't try to repair it. Call a qualified technician. Force or attempted repair may result in a fire or explosion.</p> <p>D Do not use the appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system which has been under water.</p> |
|--|--|

WHAT TO DO IF YOU SMELL GAS

- Do not try to light an appliance.
- Do not touch any electrical switch; do not use any phone in your building.

LIGHTING INSTRUCTIONS

- | | |
|--|---|
| <ol style="list-style-type: none"> 1. Stop! Read the safety information above this label. 2. Set the thermostat to lowest setting. 3. Turn off all electrical power to the appliance. 4. Locate valve under the burner assembly. 5. If the control knob is not already in the off position, i.e. the word "OFF" in the 9 o'clock position, then push in the gas control knob slightly and turn ⤵ clockwise to "OFF". NOTE: Knob cannot be turned from "PILOT" to "OFF" unless knob is pushed in slightly. Do not use force. 6. Wait five [5] minutes to clear out any gas. If you then smell gas. STOP! Follow "B" in the safety information above on this label. If you don't smell gas then go to the next step. 7. Now push in the control knob slightly and turn ⤵ counter-clockwise to the "PILOT" position. 8. Push in the control knob all the way and hold it. With the other hand push in the red igniter button until you hear a click. Now observe closely the pilot burner located on the rear center-left hand side of the main burner. | <p>If a flame has appeared then continue to depress the control knob for 20 seconds. If the flame did not appear then continue to depress the red igniter button every 5 seconds until a flame is established. NOTE: If after 30 seconds a flame has not yet been established then turn the control knob back to the off position and repeat steps 5, 6 & 7.</p> <ol style="list-style-type: none"> 9. Once the pilot has been established hold the control knob in the depressed position for approximately 25 seconds before releasing. If the flame goes out then repeat steps 7 and 8. <ul style="list-style-type: none"> • If the knob does not pop up when released, stop and immediately call your service technician or gas supplier. • If the pilot will not stay lit after several tries, turn the gas control to "OFF" and call your service technician. 10. Now turn the control knob to the "ON" position. The burner will not light unless the wall switch thermostat or remote control is turned "ON" or in the case of the thermostat there is a call for heat. 11. Close the access door and turn all electrical power back to the appliance. 12. The pilot must be turned off when the unit is not in use. |
|--|---|

TO TURN OFF THE APPLIANCE

- | | |
|--|--|
| <ol style="list-style-type: none"> 1. Set the thermostat to lowest setting. 2. Turn off all electric power to the appliance if service is to be performed. 3. Open the control access door. | <ol style="list-style-type: none"> 4. Push in the gas control knob slightly and turn ⤵ clockwise to the "OFF" position. Do not force. 5. Replace control access panel. |
|--|--|

NOTE: Only one on/off device (manual on/off, remote control, or hard wired thermostat) should be connected to the appliance at any one time, this is most important when installing an insert or stove as the on/off rocker switch is installed at the factory.

Recommended Maximum Lead Length (Double Wire)
When Using Wall Switch or Thermostat

Wire Size	Max. Length
14ga	100ft [30.4m]
16ga	64ft [19.5m]
18ga	40ft [12.1m]
20ga	25ft [7.6m]
22ga	15ft [4.5m]

CAUTION: DO NOT WIRE 120V POWER TO MILLIVOLT SWITCHES OR THERMOSTAT.

Troubleshooting the Gas Control System

⚠ WARNING

BEFORE DOING ANY GAS CONTROL SERVICE WORK, REMOVE THE GLASS FRONT.

NOTE: Before troubleshooting the gas control system, be sure external gas shut off is in the "On" position.

Problem	Possible Causes	Corrective Action
Spark igniter will not light.	Defective or misaligned electrode at pilot.	Check for spark at electrode and pilot: if no spark and electrode wire is properly connected, replace igniter.
	Defective igniter (push-button).	Using a match, light pilot. If pilot lights, turn off pilot and push the red button again. If pilot will not light - check gap at electrode and pilot should be 1/8" to 1/4" to have a strong spark.
Pilot will not stay lit after carefully following lighting instructions.	Defective thermocouple (flame switch where applicable).	Check pilot flame. Must impinge on generator and thermocouple. Clean and/or adjust pilot for maximum flame impingement on generator and thermocouple. Replace thermocouple if pilot will not hold. (Hand tight 1/8 turn on replacement)
	Defective valve magnet.	Replace valve, if pilot won't hold after the thermocouple is replaced.
Pilot burning, no gas to burner, valve knob "ON", and wall switch "ON".	Wall switch or wires defective.	Check wall switch and wires for proper connections. Jumper wire across terminals at wall switch. If burner comes on, replace defective wall switch. If okay, jumper wires, across wall switch wires at valve. If burner comes on, wires are faulty or connections are bad.
	Generator may not be generating sufficient voltage.	Check generator with millivolt meter. Take reading at generator terminals of gas valve. Should read 325 millivolts minimum while holding valve knob depressed in pilot position and wall switch "off" Replace faulty generator if reading is below specified minimum.
	Plugged burner orifice.	Check burner orifice for stoppage and remove.
	Defective automatic valve operator.	Remove wall switch wires from gas valve. Install jumper wires from top bottom terminals of gas valve. Turn valve on "ON". If main burner does not light, replace valve.
Frequent pilot outage problem.	Pilot flame may be too low or blowing (high) causing the pilot safety to drop out.	Clean and/or adjust pilot flame for maximum flame impingement on generator and thermocouple. *See NOTE below – Seven Day Timer
Flame lifts off burner and goes out in less than 30 seconds.	Inner 4" liner has come off flue or termination, flame is starving for oxygen.	Attach 4" liner to flue or termination using screws, silicone and clamps as stated in manual.
Flame lifts off burner on one side while the rest of the flame remains lit.	Improper installation of firebrick. Firebrick is likely leaning.	Be sure to position firebrick against firebox walls and be sure to use brick clips attached to the inner side of firebox.

***NOTE:** The pilot system for this appliance may be equipped with a **Seven Day Timer**, in which case the pilot flame will be extinguished if the main burner has not been turned ON for seven days.

This Seven Day Cycle is reset every time the main burner is cycled ON / OFF and the pilot remains lit.

If more than seven days has passed since the main burner has been cycled ON / OFF and the pilot is also out, follow the procedures described in this manual to light the pilot.

-Remote Control Operation-

The Proflame GTM is configured to control the on/off main burner operation, its flame levels, and provides on/off and Smart thermostatic control of the appliance.

Transmitter

The Transmitter is powered by 3 AAA type batteries. A Mode Key is provided to Index between the features and a Thermostat Key is used to turn on/off or index through thermostat functions

Remote Receiver

The Receiver connects directly to the gas valve and stepper motor with a wiring harness. The Receiver is powered by 4 AA type batteries. The Receiver three position slider switch can be set to one of three positions: ON (Manual Override), Remote (Remote control) or Off.

Initializing the System for the first time

Install 4 AA batteries into the receiver battery bay. Install 3 AAA type batteries in the Transmitter battery bay. Place the 3 position slider switch in the "Remote" position. Insert the end of a paper clip into the hole marked "PRG" on the Receiver front cover. The Receiver will "beep" three (3) times to indicate that it is ready to synchronize with a Transmitter. Push the On button. The Receiver will "beep" four times to indicate the Transmitter's command is accepted. The system is now initialized.

Temperature indication Display

With the system in the "OFF" position, press the Thermostat Key and the Mode Key at the same time. Look at the LCD screen on the Transmitter to verify that a C or F is visible to the right of the Room Temperature display.

Turn the Appliance On or Off

Press the ON/OFF Key on the Transmitter

Remote Flame Control

The Proflame GTM has six (6) flame levels. Pressing the Down Arrow Key once will reduce the flame height by one step until the flame is turned off. The Up Arrow Key will increase the flame height each time it is pressed. If the Up Arrow Key is pressed while the system is on but the flame is off, the flame will come on in the high position.

NOTE: The Remote Receiver module can also be located outside of the appliance to a maximum of 6ft away installed in a certified deep wall switch electrical box (2-3/4" depth). For this configuration an extension wiring harness (P/N: 1001-P904S1) is required.

Room Thermostat (Transmitter Operation)

The Remote Control can operate as a room thermostat. To activate this function, press the Thermostat Key. The LCD display on the Transmitter will change to show that the room thermostat is "ON" and the set temperature is now displayed. To adjust the set temperature, press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter.

Smart Thermostat (Transmitter Operation)

The Smart Thermostat function adjusts the flame height in accordance to the difference between the set point temperature and the actual room temperatures. As the room temperature gets closer to the set point the Smart Function will modulate the flame down. To activate this function, press the Thermostat Key until the word "SMART" appears to the right of the temperature bulb graphic. To adjust the set temperature, press the Up or Down arrow Keys until the desired set point temperature is displayed.

Key Lock Function

This function will lock the keys to avoid unsupervised operation. To activate this function, press the MODE and the UP Arrow Key at the same time. To de-activate this function, press the MODE and the UP Arrow Key at the same time.

Low Battery Detection

Transmitter - When the Transmitter batteries are low, a Battery Icon will appear on the LCD display of the Transmitter.
Receiver - When the Receiver batteries are low, No "beep" will be emitted from the Receiver when it receives an On/Off command from the Transmitter. When the batteries are replaced the "beep" will be emitted from the Receiver when the ON/OFF Key is pressed (See Initializing the System for the first time).

Manual Bypass Of The Remote System

If the batteries of the Receiver or Transmitter are low or depleted, the appliance can be turned on manually by sliding the three position slider switch on the Receiver to the ON position. This will bypass the remote control feature and the appliance main burner will come on if the gas valve is in the "On" position.

*In the U.S.A. Thermostats are not permitted for Vented Gas Fireplaces (ANSI Z21.50b-2009 -Decorative).,

IPI Electronic Ignition System

Overview

The IPI system is an advanced burner controller that provides you with the option of having either a Standing-Pilot, or an intermittent igniting system. This alternating mode is controlled by the CPI/IPI Switch (Continuous Pilot Ignition/Intermittent Pilot Ignition) located on the IPI System Box. The difference between a Standing-Pilot and an Intermittent-Pilot is in whether the pilot stays lit or shuts off:

In Standing-Pilot, the pilot assembly is lit by the IPI Main Module and continues to stay lit until 1) the CPI/IPI Switch is switched to the IPI position; 2) a loss of electrical power (battery and AC source), 3) the flame sensor loses its signal, 4) the fuel supply discontinues, or 5) the IPI Main Module malfunctions.

In the Intermittent-Pilot mode, the pilot shuts off when the appliance is not in use. The advantage of this mode is that fuel is not consumed when the fireplace is not operating.

NOTE: In some jurisdictions Intermittent-Pilot is required. That means the pilot cannot remain lit when the appliance is not operating.

Components

The core of the IPI system is the Main Module and the IPI Valve. With these two components the system is able to operate a gas fireplace. There are also other components available to complement the IPI system.

IPI System Cover: Is essential in keeping the components at their proper operating temperatures. **DO NOT OPERATE THE APPLIANCE WITHOUT THIS COVER.**

Modulating Servo Motor: Is an add-on valve component that permits HI/LO functionality to be controlled by the remote. Contrary to this feature is a Manual HI/LO Control Knob. The Modulating Servo Motor requires the Remote system to be present.

Backup Battery Pack: This component permits the IPI system to operate without the need for an external AC Adapter power source. The advantage to using the battery backup is that in the case of a power failure, the appliance is still operable.

NOTE: In certain instances the IPI Main Module requires resetting. This can occur if the system is unable to ignite the pilot or the main burner in the allotted time period. The IPI is programmed to lockout all commands. To reset this lockout you must deplete the system of all electrical power. This means to remove the batteries from the Battery Pack, remove the batteries from the Remote Receiver (if applicable), and disconnect the AC Adapter from the system. Leave the power off for approximately 25 seconds to clear its lockout.

Remote Receiver: This component provides the capability of controlling the appliance with a wireless remote transmitter.

Standing Pilot Mode for Colder Climates (Below Freezing)

For IPI models it may be necessary to set the appliance to Standing Pilot mode to maintain heat in the cavity. The purpose of this procedure is to prevent cold air from penetrating the chimney and then onto the living space. Therefore, when the internal temperature is slightly elevated the fireplace is able to freely exhaust its combustion and hence making it easier to startup.

Standing Pilot Mode for Colder Climates (Below Freezing)

For IPI models it may be necessary to set the appliance to Standing Pilot mode to maintain heat in the cavity. The purpose of this procedure is to prevent cold air from penetrating the chimney and then onto the living space. Therefore, when the internal temperature is slightly elevated the fireplace is able to freely exhaust its combustion and hence making it easier to startup.

NOTE: The pilot system for this appliance may be equipped with a Seven Day Timer, in which case the pilot flame will be extinguished if the main burner has not been turned ON for seven days. This Seven Day Cycle is reset every time the main burner is cycled ON / OFF and the pilot remains lit. If more than seven days has passed since the main burner has been cycled ON / OFF and the pilot is also out, follow the procedures described in this manual to light the pilot.

IPI Electronic Ignition System

NOTE: The Remote Receiver module can also be located outside of the appliance to a maximum of 6ft away installed in a certified deep wall switch electrical box (2-3/4" depth). For this configuration an extension wiring harness (P/N: 1001-P904SI) is required.

Electrical Supply in Series: The entire IPI system can be powered by a single power source (i.e. by the AC Adapter). This is advantageous if you do not want to supply extra batteries. To achieve this simply connect the AC Adapter into the Remote Control wiring harness instead of the main IPI harness. From the Remote wiring harness, use its male plug-in connector and connect it to the female plug-in in the main IPI harness. Now the circuit is complete. So the way it works is that electrical power is supplied to the Remote Receiver module and then proceeds to the Main IPI module. Furthermore, note that a Backup Battery Pack is not required in this configuration. Instead, batteries in the Remote Receiver act as the backup supply.

Junction Box Location

The electrical junction box must be located inside the existing firebox.

IPI Electronic Ignition Parts List – Standard System

ITEM NO.	PART NO.	DESCRIPTION
1	1006-P002si	Valve IPI Hi/Lo NG
	1006-P003si	Valve IPI Hi/Lo LP
2	*1002-P047si	Pilot Assembly-LP -24" Wire
	*1002-P033si	Pilot Assembly-NG -24" Wire
3	1002-P017si	Spark Electrode (with wire)
	*1002-P119si	Spark Electrode (with wire- 35" Length)
4	1002-P903si	Electrode Flame Sensor
	*1002-P910si	Electrode Flame Sensor (35" Length)
5	1002-P302si	IPI Ignition Board
6	1002-P850si	AC Wall Adapter
7	1002-P12BH	Battery Pack
8	1002-P912si	Wiring Harness
9	1001-P166si	Orifice Pilot -NG#62
	1001-P168si	Orifice Pilot -LP#35
10	1002-P013si	Stepper Motor -NG
	1002-P012si	Stepper Motor -LP
	1002-P016si	Hi/Lo Regulator -NG
	1002-P014si	Hi/Lo Regulator -LP

*Models ZRB46E / MQRB4436E / MQRB5143E / MQRB6961E
Longer (35") Wire length is required for these units.

Proflame System
Configuration: Manual Hi/Low
Simplified Wire Diagram

Configuration #1: Basic manual HI/LO and manual ON/OFF capabilities.

Configuration #2: Remote ON/OFF and manual HI/LO capabilities. OPTIONAL: For units with remote HI/LO capabilities, a modulating servo is required to be installed on the valve. The connectors to this servo must be connected to the Remote Harness as shown in the figure above.

Operating the Receiver Without Batteries For GT / EGT / GTM / EGTM Remote Controls

-Wiring Harness P/N 1002-P906si required for both IPI & Millivolt systems.

-Millivolt Systems will also require Power Adapter P/N 1002-P850si.

The Remote Receiver & IPI or Millivolt system can be powered by the AC Adapter. This is advantageous if you do not want to use batteries. Simply connect the AC Adapter into the Remote Control Wiring Harness as per the diagrams below.

IPI System EGTM

Millivolt System GTM

*In the U.S.A. Thermostats are not permitted for Vented Gas Fireplaces (ANSI Z21.50b-2009 -Decorative).

IPI PROFLAME 2 - COMPONENT PARTS

PART NO.	DESCRIPTION
1. 1005-P001SI	Valve IPI Proflame PF2 885.001 NG - Stepper
2. 1005-P002SI	Valve IPI Proflame PF2 885.002 LP - Stepper
3. 1005-P325SI	Module IPI - Proflame 2 - 584.325
4. 1005-P924SI	Harness PF2 - 584.924
5. 1005-P042SI	Transmitter - PF2 - Black 584.042
6. 584-PWR-C	Wire Harness PF2 – Power Cord
7. 584-X4P	Terminal Block
8. 584-X10	Wire Harness PF2
9. 584-ACC01-C	Wire Harness PF2 - Fan/Light
10. 584-X8-B	Wire Harness PF2 - Optional Reset Harness
11. 584-X12	Optional Power Vent Harness

NOTE: Fan and / or Light Options are not available on some fireplaces.
Check with your dealer.

Proflame 2 IFC Module and Remote Control

Pairing Remote Control:

- Install the 3 AAA type batteries in the battery bay, located on the base of the Remote Control. Note polarity of the batteries and insert them as indicated.
- Connect the AC power supply to the IFC Module.
- Press the SW1 button on the IFC Module so the IFC will “beep” and a red LED is illuminated to indicate that the IFC Module is ready to synchronize with a Remote Control within 10 seconds. With the batteries already installed in the Remote Control, push the ON button. The receiver will “beep” four times to indicate the Remote Control’s command is accepted.

The system is now initialized.

Resetting Proflame 2 IFC Module for Manual Use

If the transmitter gets misplaced, is broken, or is no longer wanted the PF2 Module can be reset to a manual system. A manual on/off switch or thermostat may be installed at the X4 connector (this connection is Jumped at the factory) no power is required.

The following sequence must be followed to reset the PF2 Module:

- Press the Red **SW1** button until you hear three beeps.

- Within 10 seconds press the **SW1** button again until you hear it beep.
- The PF2 Module may now be turned on/off manually (x4 connector) by a switch (not supplied), the pilot will remain on CPI (continuous pilot ignition) mode, all other functions of main burner, fan and lights will be on the high setting.

Fan Startup and Shutdown Timings:

Fan setting is started with a delay of 5 minutes from the fireplace ignition and stopped with a delay of 12 minutes from the fireplace switching off.

Low Battery Power Detection

When the Remote Control’s batteries are low, a Battery Icon will appear on the LCD display before all power is lost. When the batteries are replaced this icon will disappear.

Battery Backup

The PF2 module is powered by line voltage (AC) with provision of battery backup in case of main power loss. Fans and lighting features will not function with the PF2 Module is powered by battery backup. It is recommended that the 4 x AA batteries are changed before each heating season.

Cold Climates – CPI Setting - Proflame 2 Remote Control

Use the **CPI setting** during cold weather, otherwise the fireplace may have a hard time starting up and establishing a flame. The **CPI** (Continuous Pilot Ignition) setting will keep the firebox and fireplace exhaust vent warm during cold weather. When the firebox and exhaust vent are warm, exhaust gasses will readily flow out of the firebox.

If the firebox and venting are too cold, there is resistance due to the heavy cushion of cold air, and combustion gasses may not rise into the exhaust vent, thus causing the fireplace to cycle or **Lockout** (if this happens see **Lockout Reset Procedures** below).

NOTE: The pilot system for this appliance may be equipped with a **Seven Day Timer**, in which case the pilot flame will be extinguished if the main burner has not been turned ON for seven days. This Seven Day Cycle is reset every time the main burner is cycled ON / OFF and the pilot remains lit. If more than seven days has passed since the main burner has been cycled ON / OFF and the pilot is also out, follow the procedures described in this manual to light the pilot.

To switch from IPI to CPI Mode:

1. Turn the fireplace OFF using the **ON / OFF Key**.

2. Press the **Mode Key**. Display will appear as below.

3. Press UP on the **UP / DOWN Arrow Key**. Display will show **CPI**.

The module in the fireplace will beep once to confirm command.

TO RETURN TO IPI (INTERMITTENT PILOT) MODE:

Repeat steps one and two, and then press DOWN on the **UP / DOWN Arrow Key**.

The module in the fireplace will beep once to confirm command.

Lockout Reset Procedures – Proflame 2

If the fireplace has cycled too many times in a short period of time, it will shut down and become unresponsive to any new command.

The LED light on the Proflame 2 module in the fireplace will be flashing red.

This condition is a **Lockout** state.

Lockout Reset Procedure:

1. Disconnect power from the Proflame 2 module in the fireplace for 10 seconds. This includes removing the backup batteries.
2. Once the 10 second interval has passed, reconnect power and reinstall backup batteries. The pilot should now try to light.
3. If the fireplace does not come on, call your fireplace technician.

Proflame 2 Remote Control

Remote-Flame Control

The proflame has six (6) flame levels. With the system on, and the flame level at the maximum in the appliance, pressing the Down Arrow Key once will reduce the flame height by one step until the flame is turned off.

The Up Arrow Key will increase the flame height each time it is pressed. If the Up Arrow Key is pressed while the system is on but the flame is off, the flame will come on in the high position. (Fig. 7 & 8) A single "beep" will confirm reception of the command.

Fig. 7: Flame Off

Flame Level 1

Fig. 8: Flame level 5

Flame Level Maximum

Room Thermostat (Transmitter Operation)

The Remote Control can operate as a room thermostat. The thermostat can be set to a desired temperature to control the comfort level in a room.

To activate this function, press the Thermostat Key (Fig. 1). The LCD display on the Transmitter will change to show that the room thermostat is "ON" and the set temperature is now displayed (Fig. 9). To adjust the set temperature, press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter.

Fig. 9

Fig. 10

Smart Thermostat (Transmitter Operation)

The Smart Thermostat function adjusts the flame height in accordance to the difference between the set point temperature and the actual room temperatures. As the room temperature gets closer to the set point the Smart Function will modulate the flame down. To activate this function, press the Thermostat Key (Fig. 1) until the word "SMART" appears to the right of the temperature bulb graphic (Fig. 11).

To adjust the set temperature, press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter (Fig. 12).

Note:
When Smart Thermostat is activated, manual flame height adjustment is disabled.

Fig. 11: Smart flame function

Fig. 12

Fan Speed Control

If the appliance is equipped with a hot air circulating fan, the speed of the fan can be controlled by the Proflame system. The fan speed can be adjusted through six (6) speeds. To activate this function use the Mode Key (fig.1) to index to the fan control icon (Fig. 13). Use the Up/Down Arrow Keys (Fig.1) to turn on, off or adjust the fan speed (fig. 14). A single "beep" will confirm reception of the command.

Fig. 13

Fig. 14

Remote dimmer control (Light)

The auxiliary function controls the AUX power outlet by the dimmable light control. To activate this function use the Mode Key (fig. 1) to index to the AUX icon (fig. 15 & 16).

The intensity of the output can be adjusted through six (6) levels. Use the Up/Down Arrow Keys (Fig.1) adjust the output level (fig. 16). A single "beep" will confirm reception of the command.

Note:
This function is only available in Room Thermostat or Smart Thermostat Control Mode.

Fig. 15

Fig. 16

IPI Proflame 2 System Configuration: Modulating Controls Simplified Wiring Diagram

Manufactured by: Kingsman Fireplaces
2340 Logan Avenue
Winnipeg, MB R2R 2V3

For use with all Kingsman manufactured IPI Proflame 2 models, for all types of gas noted on rating plate. Supply 120VAC 60Hz 3A, 6 volts battery backup.

Pour utilisation avec tous les modèles IPI Proflame 2 fabriqués par Kingsman, pour tous les types de gaz noté sur la plaque signalétique. Voltage d'alimentation: 120VAC 60Hz 3A et 6 volts pour le bloc-piles de secours.

This component should be installed by a qualified service agency.
Cetle composante doit être installée par une entreprise de service qualifiée.

Part #1005-P2SCH

Electronic Ignition Lighting Instructions

WARNING

If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

Always light the pilot whether for the first time or if the gas supply has ran out with the glass door opened or removed.

FOR YOUR SAFETY READ BEFORE LIGHTING:

- A. This fireplace is equipped with an ignition device which automatically lights the pilot. Do not try to light by hand.
- B. Before operating smell all around the fireplace area for gas and next to the floor because some gas is heavier than air and will settle on the floor.
- C. Do not use this fireplace if any part has been under water. Immediately call a qualified service technician to inspect the fireplace and replace any part of the control system and any gas control which has been under water.

WHAT TO DO IF YOU SMELL GAS:

- Turn off all gas to the fireplace.
- Open windows.
- Do not try to light any appliance.
- Do not touch any electric switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

LIGHTING INSTRUCTIONS

1. Stop! Read the above safety information on this label.
2. Remove batteries from receiver, and/or Battery Backup Pack.
3. Turn off all electric power to the fireplace.
4. This fireplace is equipped with an ignition device which automatically lights the pilot. Do not try to light the pilot by hand.
5. Open the glass door.
6. Turn manual shutoff valve clockwise  to off (Located behind the access panel).
7. Wait five (5) minutes to clear out any gas. If you smell gas including near the floor, **STOP!** Follow "B" in the above safety information on this label. If you don't smell gas go to the next step.
8. Turn manual shutoff valve counter-clockwise  to on.
9. Close the glass door.
10. Turn on all electric power to the fireplace and re-install batteries into the Transmitter/Receiver, and/or Battery Backup Pack.
11. Turn "On" Switch that operates the Main Burner. If using a Remote Control refer to Remote Control Operation Manual for activation.

TO TURN OFF GAS

1. Turn off all electric power to the fireplace if service is to be performed, including removing batteries from Remote Transmitter/Receiver and/or Battery Backup Pack.
2. Access door inside the firebox must be removed to access the manual shutoff valve.
3. If alternate shut-off valve was installed it can be shutoff instead of going through the fireplace to access the fireplace shut off valve.

PARTS LIST:

- [1] – Co-linear termination
- [8] - #8 washers
- [8] - #8 x 1 PH Quad
- [8] - #8-18 x 3/4" PH DT
- [1] – Tube Millpac Black

Vertical Venting in Cold Climates

In cold climate conditions where temperatures go below -10°C [14°F], we recommend that the chase be insulated and where the vent pipe enters into the attic space that the pipe be wrapped with an insulated Mylar sleeve. This will increase the temperature of the vent and help the appliance to vent properly in cold weather conditions.

It is also important in vertical vented direct vent appliances that the appliance be operated daily during the winter months as this will help stop the Termination from freezing up. We recommend using a thermostat set at room temperature to allow the unit to cycle.

For IPI models it may be necessary to set the appliance to Standing Pilot mode to maintain heat in the cavity. The purpose of this procedure is to prevent cold air from penetrating the chimney and then onto the living space. Therefore, when the internal temperature is slightly elevated the fireplace is able to freely exhaust its combustion and hence making it easier to startup.

This appliance must not be connected to a chimney flue serving a separate solid-fuel burning appliance.

This appliance is approved with Kingsman Flex Vent System (as listed in the manual) or MG Duravent flex pipe system.

All venting lining products must be approved and installed according to the vent manufacturers installation instructions. All vent liners must terminate in a rain cap to prevent debris and rain from entering the vent and possibly damaging the appliance or creating an unsafe condition. The area between the existing chimney and liner must be capped off for the same reasons as above and to reduce the chances of venting problems and corrosion of the vent.

If this fireplace insert is to be used to replace an existing fireplace insert the existing vent liner must be of the proper size and if so must be inspected for obstructions, damage and/or corrosion. Replacement must be done as necessary.

Before any vent liner is run through a chimney or other approved venting system, chimney must be inspected, cleaned and repaired if necessary. A chimney which was used for a solid fuel fireplace must be professionally cleaned in order to reduce corrosion of the vent or other possible safety hazards.

Installation of Vertical Termination

1. Before attaching the flex vents to the termination, you will have to determine how the cap will be attached to the existing chimney crown, clay lined chimney or wood stove vent pipe. The Seal Plate of the termination may be cut, notched and formed to make a good seal to the existing vent or be left flat.
2. Using a high quality sealing compound (RTV Silicone) place a bead of sealant onto the vent or chimney top. This will provide a seal against water and rain from entering the existing flue.
3. Attach the vent pipes to the termination with Millpac and [4] screws and washers per pipe joint. Be sure to label the exhaust and intake flex pipes. Make sure not to connect the exhaust to the intake or vice versa. Lower the termination and vent pipe down the vent and screw the seal plate to the chimney crown, clay tile chimney, or wood stove vent. It may be necessary to predrill holes into the chimney crown (depending on material) [8 screws].

	Vertical (rise)	Horizontal (run)
Min.	12ft [3.7m]	0ft [0m]
Max.	40ft [12.2m]	2ft [0.6m]

⚠ WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

Cutting any sheet-metal parts of the fireplace, in which the gas fireplace insert is to be installed, is prohibited.

Venting System for IDV34	
IDVVT36	Vertical Vent Termination
IDVFK25	Flex Pipe kit ([Qty 2] 3" x 25ft unexpanded flex pipes complete with Millpac and screws.)
#46DVA-CL33	MG Duravent Kit (Termination cap and [2] pieces of aluminum flex 35' long)

Venting System for IDV44	
IDVVT43	Vertical Vent Termination
I43FK25	Flex Pipe kit ([Qty 1] 3" x 25ft Intake, [Qty 1] 4" x 25ft exhaust) Unexpanded flex pipes complete with Millpac and screws.
46DVA-CL34	MG Duravent Kit (Termination cap and [2] pieces of aluminum flex 35' long)

Vent Pipe Installation IDV34 / IDV44

1. Attach the vent pipes to the termination with Millpac and 4 screws per pipe joint. Be sure to label the exhaust and intake flex pipes. Make sure not to connect the exhaust to the intake or vice-versa. Lower the termination and vent pipe down the vent and screw and seal plate to the chimney crown, clay tile chimney or wood stove vent. It may be necessary to pre-drill holes into the chimney crown (depending on material) (8 screws).
2. The two vent pipes should now be hanging in the existing fireplace. Attach the adapter to the two suspended vent pipes with Millpac and screws. Let the adapter hang in place until the unit is ready to be positioned.
3. Slide the unit into place carefully. Ensure that the adapter slides along the top of the unit, in between the guides, and check that it remains flat. (Fig. 2)
4. Once the unit is slid back into position use the two screws previously removed to secure the adapter plate. When tightening the adapter plate check to make sure the plate is flat to the unit and the rear catch lock is engaged over the rear tab of unit. (Fig. 2 & 3)
5. Use Millpac to seal the vent pipe joints and ensure that it is free of any leakage.

NOTE: If the factory-built fireplace has no gas access hole(s) provided, an access hole of 1.5in [37.5mm] or less may be drilled through the lower sides or bottom of the firebox in a proper workmanship like manner. This access hole must be plugged with non-combustible insulation after the gas supply line has been installed.

If You Live In A Cold Climate Zone And Your Chimney Is On The Side Of Your House

In cold climates, especially where the chimney is located on the outside of the home it may be necessary to insulate the chimney cavity with NON-COMBUSTIBLE insulation such as vermiculite or Roxul insulation. This will keep the chimney cavity warm and avoid cold start ignition problems.

FOLLOW ALL LOCAL CODES.

NON-COMBUSTIBLE INSULATION (Vermiculite, etc.)

IDVLCP (Seal this plate with RTV Red Silicone.)

-Vertical Venting Runs Taller Than 15 Feet-

We recommend that the pilot be left on at all times for vertical venting runs taller than 15 feet. This will maintain a slight draft in the vent, allowing the burner to light quickly.

The pilot should be lit ½ hour before turning on appliance.
The pilot should be left on during the heating season.

PROFLAME 1 IPI (Intermittent Pilot Ignition) Appliances Cold Climate Mode

For (IPI) Intermittent Pilot ignition appliances in colder climates (below freezing) it will be necessary to have the continuous pilot (cold climate mode) operation turned on where a heated chimney is needed to maintain the draft to ensure proper operation.

This appliance may run with the pilot continuously running (cold climate mode) or in intermittent mode. For most homeowners, the intermittent mode is preferred (as this saves fuel). However, in some situations the homeowner may prefer to switch the appliance to cold climate mode. The most typical reasons for switching to cold climate mode are:

- Cold Conditions (below freezing) – you may notice that the burner does not light quickly, and the flames lift off the burner. If this is the situation, we recommend you switch to continuous pilot/cold climate mode. This will keep the cavity warm and will create a slight draft in the vent, allowing for the burner to light quickly and draft correctly.
- Condensation on Glass after Startup – certain installations may encounter excessive fogging on the window after startup (not just the first time the appliance was started). This is normal but may be remedied or reduced by switching the appliance to cold climate mode.
- Cold Glass or Hearth area – in cold conditions you may notice that the floor, hearth area and glass become cold. To remedy this, switch the appliance to cold climate mode.
- Frequent On/Off Operation – if you are frequently turning the appliance on and off, you may wish to leave it in cold climate mode. This allows the burner to turn on more quickly, without the pilot ignition sequence.

IDV34 Parts List

PART NO. DESCRIPTION

FIREPLACE BASE UNIT

IDV34N [Millivolt]	INSERT DIRECT VENT
IDV34NE [IPI]	FIREPLACE
IDV34NE2 [IPI]	Natural Gas 31,000 BTU
IDV34LP [Millivolt]	INSERT DIRECT VENT
IDV34LPE [IPI]	FIREPLACE
IDV34LPE2 [IPI]	Liquid Propane 28,500 BTU

LOG SETS OR GLASS SUPPORT PLATFORMS (Required for Each Unit)

LOGF35	Log Set Fiber Split Oak (350 Series)
RSP10	Glass Support Platform with bronze glass
36IDV-204	Pilot Shield for RSP10

MARQUIS OPTIONS

MQRSP4	Rock Support Platform (IDV26 / IDV33 / IDV43)
MQRSP11	RSP10 Rock Support, Glass Retainers, 2 small bags Lava Rock, 1 bag 350 Ember
MQLOGF33	Driftwood Log Set- Must Use MQRSP11
MQRBD4	Log Set - Drift Wood - Three Piece (Requires MQRSP11 and 15 lbs of Glass Media)
MQROCK2	Rock Set - Contemporary Collection - Natural
MQROCK3	Rock Set - Contemporary Collection - Multi-Colored
MQRSP8	Glass Support Platform (IDV26 / IDV33 / IDV43)
36IDV-205	Pilot Shield for MQRSP8 – Replacement Part
MQG5ZG	Glass Media - ZIRCON Glacier Ice - 5 lbs.
MQG5A	Decorative Ember Glass - 1/2" Azuria (Light Blue) - 5 lbs
MQG5B	Glass Media - 1/2" Black - 5 lbs.
MQG5C	Glass Media - 1/2" Bronze - 5 lbs.
MQG5W	Decorative Glass - 1/2" White - 5lbs
MQEMBER3	Ember Chunks - (3 bags)
MQSTONE	Decorative Stones
MQSTONE10	Decorative Stones - 10 PCE Set

IDV34 CLEAN VIEW FRONTS

I34CV1BL	Clean View - Black - c/w Safety Screen - 35 1/4" W x 24 3/16" H x 13/16" D
MQ34CV2BL	Clean View - Black - c/w Safety Screen - 35 3/8" W x 24 11/16" H x 1 3/4" D
MQ34CV3BL	Clean View - Black - 37 1/8" W x 25 3/16" H x 1 7/16" D (When using a I34CV3 a Designer Door or Door Frame is Required)
MQ34CV4PFBL	Clean View - Picture Frame - Black 37 1/8" W x 27 3/8" H x 1 7/16" D (When using a I34CV4 a Designer Door or Door Frame is Required)

DOORS FOR MQ34CV3 and MQ34CV4PF

MQ34SF1BL	Frame Door c/w Safety Screen - Openable- (Black)
MQ34DD1BL	Heavy Iron Door c/w Safety Screen - Openable- (Black)

SURROUNDS FOR CLEAN VIEW FRONTS (OPTIONAL)

I34S3927BL	Surround 39" Wide by 27-5/16" Tall by 1/2" Thick [Black]
I34SPF4131BL	Picture Frame Surround 41-1/8" Wide by 31-3/8" Tall by 1/2" Thick [Black]
I34SU4541BL	Universal Surround (for custom applications) 45" Wide by 41" Tall

FIREPLACE ACCESSORIES FOR IDV34

I34CSS	Safety Screen Barrier (Replacement) - MQ34SF1/MQ34DD1
I34CV1SS	Safety Screen Barrier (Replacement) - I34CV1/CV2

BRICK AND PORCELAIN LINERS

IDV33RL	Brick Liner
MQ33RLF	Brick Liner - Fluted
IDV33PRL	Porcelain Liner (Generation 2)

IDV33 CONVERSION KITS

33IDV-CKNG	Conversion Kit Natural Gas (IDV34N) [Millivolt]
33IDV-CKLP	Conversion Kit - Liquid Propane (IDV34LP) [Millivolt]
33IDV-CKNGI	Conversion Kit Natural Gas (IDV34NE) [IPI]
33IDV-CKLPI	Conversion Kit - Liquid Propane (IDV34LPE) [IPI]
33IDV-CKNG2	Conversion Kit Natural Gas (IDV34NE2) [IPI]
33IDV-CKLP2	Conversion Kit - Liquid Propane (IDV34LPE2) [IPI]

IDV44 Parts List

PART NO.	DESCRIPTION
FIREPLACE BASE UNIT	
IDV44N [Millivolt]	INSERT DIRECT VENT

MQSTONE10	Decorative Stones - 10 PCE Set
IDV44 CLEAN VIEW FRONTS	
I44CV1BL	Clean View - Black - C/W Safety Screen - 39 9/16" W x 28 1/2"H x 13/16"D
MQ44CV2BL	Clean View - Black - C/W Safety Screen - 39 5/8" W x 29 1/16"H x 1 3/4"D
MQ44CV3BL	Clean View - Black - 41 7/16" W x 29 1/8" H x 1 7/16" Depth
DOORS FOR MQ44CV3BL	
MQ44SF1BL	Door Frame - c/w Safety Screen
MQ44DD1BL	Designer Door - Series 1 - c/w Safety Screen
SURROUNDS FOR CLEAN VIEW FRONTS (OPTIONAL)	
I44S4432BL	Surround - Black (Covers 44" W x 32 1/16" H)
I44SPF4436BL	Surround Picture Frame - Black (Covers 44" W x 36" H)
I44SU4742BL	Surround Universal - Black (Covers 47" W x 42" H)

FIREPLACE ACCESSORIES FOR IDV44

I44CV1SS	Safety Screen Barrier (Replacement) - (I44CV1/CV2)
I43CSS	Safety Screen Barrier (Replacement) - (I44SF1BL/MQ44DD1BL)

BRICK AND PORCELAIN LINERS

IDV36RLT	Traditional Brick Liner
IDV36RLH	Herringbone Brick Liner
IDV36PRL	Porcelain Reflective Panel Liner (3 PCE)
MQ43RLF	Refractory Liner (3 PCE) - Fluted

IDV43 CONVERSION KITS

36IDV-CKNG	Conversion Kit Natural Gas (IDV44N) [Millivolt]
36IDV-CKLP	Conversion Kit - Liquid Propane (IDV44LP) [Millivolt]
36IDV-CKNGI	Conversion Kit Natural Gas (IDV44NE) [IPI]
36IDV-CKLPI	Conversion Kit - Liquid Propane (IDV44LPE) [IPI]
36IDV-CKNG2	Conversion Kit Natural Gas (IDV44NE2) [IPI]
36IDV-CKLP2	Conversion Kit - Liquid Propane (IDV44LPE2) [IPI]

COMMON PARTS FOR IDV34 & IDV44

RISER KITS

I33R40	2-1/2" Riser 40"
I33R45	2-1/2" Riser 45"

REMOTE CONTROL - MILLIVOLT

GFRC	Remote Control Millivolt / IPI – On/Off
GTRC	Remote Control Millivolt - Thermostat
GTMRCN	Remote Control Millivolt – Thermostat/Modulating - NG
GTMRCP	Remote Control Millivolt – Thermostat/Modulating - LP

REMOTE CONTROL – PROFLAME 1

EGTRC	Remote Control IPI (Thermostat)
EGTMRCN	Remote Control IPI (Thermostat/Modulating - NG)
EGTMRCP	Remote Control IPI (Thermostat/Modulating - LP)

OTHER ACCESSORIES

Z1MT	Thermostat Millivolt Wall Mount
Z80PT	Thermostat Programmable Digital Millivolt Wall Mount (1F80-40)
DCHS	Remote Control Heat Shield
1001-P904SI	Remote Receiver Extension Harness (GT Series Remotes Only)-10ft.

MILLIVOLT REPLACEMENT BURNER ASSEMBLY / BURNER

33IDV-BNGSI	Millivolt Burner Assembly [NG] c/w Valve System (For use on IDV34N only)
33IDV-BLPSI	Millivolt Burner Assembly [LP] c/w Valve System (For use on IDV34LP and IDV44LP)
36IDV-BNGSI	Millivolt Burner Assembly [NG] – c/w Valve System (For use on IDV44N only)
33IDV-200A	H-Burner (For use on IDV34/IDV44 only)

VALVE SYSTEM PARTS - NEW TOP CONVERTIBLE SIT (MILLIVOLT)

1000P-136WR	Thermopile GOAI-524

PARTS FOR IDV34 VENTING

PART NO.	DESCRIPTION
IDVVT36	Vertical Termination – Collinear 3"/3"
IDVFK25	3" Diameter [2Ea] Unexpanded 25ft Flex Pipe, Screws/Washers, Millpac
IDVLCP	Lower Chase Sealant Plate
ZDV3FC	Flex Connectors 3" Diameter

PARTS FOR IDV44 VENTING

PART NO.	DESCRIPTION
IDVVT43	Vertical Termination – Collinear 4"/3"
I43FK25	[Qty. 1] 3" and [Qty. 1] 4" Unexpanded 25ft Flex Pipe, Screws / Washers, Millpac
I43LCP	Lower Chase Sealant Plate
ZDV3FC	Flex Connectors 3" Diameter
ZDV4FC	Flex Connectors 4" Diameter

LIMITED LIFETIME WARRANTY

This Limited Lifetime Warranty applies only while the unit remains at the site of the original installation and only if the unit is installed inside the continental United States, Alaska, Hawaii, and Canada. The warranty applies only if the unit is installed and operated in accordance with the printed instructions and in compliance with applicable installation and building codes and good trade practices.

BASIC ONE YEAR WARRANTY

During the first year after installation, we will provide a replacement for any component part of your unit found to be defective in materials or workmanship, including labour costs. Repair work requires prior approval by Kingsman, labour costs are based on a predetermined rate schedule and any repair work must be done through an authorized Kingsman dealer.

(Excluded Components: Accent Light Bulbs, Gasketing and Paint)

LIMITED LIFETIME WARRANTY

The heat exchanger, combustion chamber and burner of every Kingsman product excluding the Outdoor Firepit are warranted against materials or workmanship during the period the product is owned by the original owner. The part to be replaced must be returned to our distributor in exchange for the replacement part. Any labor, material, freight and/or handling charges associated with any repair or replacement pursuant to this Limited Lifetime Warranty will not be covered by this warranty.

GENERAL TERMS

In lieu of providing a replacement part, we may, at our option, provide the distributor's component purchase price from us or a credit equal to the distributor's component purchase price from us toward the purchase of any new unit which we distribute. If a credit is given in lieu of a replacement part, the rating plate from the unit being replaced must be submitted on a warranty claim, and the unit being replaced must be made available to our distributor for disposition.

In establishing the date of installation for any purpose, including determination of the starting date for the term of this Limited Lifetime Warranty, reasonable proof of the original installation date must be presented*, otherwise the effective date will be based upon the date of manufacture plus thirty (30) days.

We will not be responsible for and you, the user, will pay for: (a) damages caused by accident, abuse, negligence, misuse, riot, fire, flood, or Acts of God (b) damages caused by operating the unit where there is a corrosive atmosphere containing chlorine, fluorine, or any other damaging chemicals (other than in a normal residential environment) (c) damages caused by any unauthorized alteration or repair of the unit affecting its stability or performance (d) damages caused by improper matching or application of the unit or the unit's components (e) damages caused by failing to provide proper maintenance and service to the unit (f) any expenses incurred for erecting, disconnecting or dismantling the unit (g) parts or supplies used in connection with service or maintenance (h) damage repairs, inoperation or inefficiency resulting from faulty installation or application (i) electricity or fuel costs or any increase in electricity or fuel cost whatsoever including additional or unusual use of supplemental electric heat.

We shall not be liable for any incidental, consequential, or special damages or expenses in connection with any use or failure of this unit. We have not made and do not make any representation or warranty of fitness for a particular use or purpose, and there is no implied condition of fitness for a particular use or purpose. We make no express warranties except as stated in this Limited Lifetime Warranty. No one is authorized to change this Limited Lifetime Warranty or to create for us any other obligation or liability in connections with this unit. Any implied warranties shall last for one year after the original installation. Some states and provinces do not allow the exclusion or limitation of incidental or consequential damages or do not allow limitations on how long an implied warranty or condition lasts, so the above limitations or exclusions may not apply to you. The provisions of this limited warranty are in additions to and not a modification of or subtraction from any statutory warranties and other rights and remedies provided by law.

Save this certificate. It gives you specific legal rights, and you may also have other rights which may vary from state to state and province to province.

In the event your unit needs servicing, contact your dealer or contractor who installed or serviced your unit. When requesting service, please have the model and serial number from each unit readily available. If your dealer needs assistance, the distributor is available for support and we, in turn support the distributor's efforts.

Fill in the installation date and model and serial numbers of the unit in the space provided below and retain this limited warranty for your files.

Model No. _____ Serial No. _____ Date installed _____

Dealer or Contractor Name: _____

*To receive advantage of your warranty, you must retain the original records that can establish the installation date of your unit.
